 FINAL EXAM**

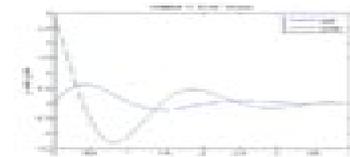

Open Book, Closed Notes, Do Not Write on this Sheet
Create a Separate MATLAB Script File for Each Problem
Submit all MATLAB files (.m) to Dr. Thomas
Each MATLAB File Must Have the Following Header:

```
1 % Final Exam, ME 1020, Spring 2016, Your Name Here
2 clc, clear all, close all
```

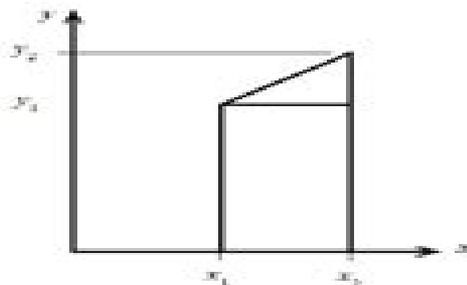

Problem 1 (4 Points): Create a MATLAB script file to calculate and plot the derivative of the function $y(x) = e^{-x} \sin(3x)$ from $0 \leq x \leq 4$ using the Forward Difference Method described in class (shown below). You must use a for loop to solve this problem. Provide a plot title and labels for the axes. Use 101 points from $x = 0$ to $x = 4$.

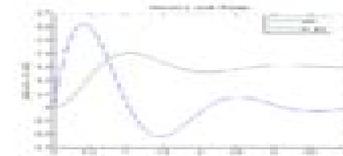

$$\left. \frac{dy}{dx} \right|_{x_2} = \frac{y_3 - y_2}{x_3 - x_2}$$

Problem 2 (4 Points): Create a MATLAB script file to calculate and plot the integral of the function $y(x) = e^{-x} \sin(3x)$ from $0 \leq x \leq 4$ using the Trapezoidal Method described in class (shown below). You must use a for loop to solve this problem. Provide a plot title and labels for the axes. Use 101 points from $x = 0$ to $x = 4$.

$$A_{\text{trapezoid}} = \frac{1}{2} (x_2 - x_1) (y_1 + y_2)$$

Introduction to Computational Science Angela B. Shiflet, George W. Shiflet, 2014-03-30 The essential introduction to computational science now fully updated and expanded Computational science is an exciting new field at the intersection of the sciences computer science and mathematics because much scientific investigation now involves computing as well as theory and experiment This textbook provides students with a versatile and accessible introduction to the subject It assumes only a background in high school algebra enables instructors to follow tailored pathways through the material and is the only textbook of its kind designed specifically for an introductory course in the computational science and engineering curriculum While the text itself is generic an accompanying website offers tutorials and files in a variety of software packages This fully updated and expanded edition features two new chapters on agent based simulations and modeling with matrices ten new project modules and an additional module on diffusion Besides increased treatment of high performance computing and its applications the book also includes additional quick review questions with answers exercises and individual and team projects The only introductory textbook of its kind now fully updated and expanded Features two new chapters on agent based simulations and modeling with matrices Increased coverage of high performance computing and its applications Includes additional modules review questions exercises and projects An online instructor s manual with exercise answers selected project solutions and a test bank and solutions available only to professors An online illustration package is available to professors

[MATLAB Numerical Methods with Chemical Engineering Applications](#) Kamal I. M. Al-Malah, 2013-07-31 A practical professional guide to MATLAB computational techniques and engineering applications MATLAB Numerical Methods with Chemical Engineering Applications shows you step by step how to use MATLAB to model and simulate physical problems in the chemical engineering realm Written for MATLAB 7 11 this hands on resource contains concise explanations of essential MATLAB commands as well as easy to follow instructions for using the programming features graphical capabilities and desktop interface Every step needed toward the final solution is algorithmically explained via snapshots of the MATLAB platform in parallel with the text End of chapter problems help you practice what you ve learned Master this powerful computational tool using this detailed self teaching guide

[Linear Systems and Signals](#) Bhagwandas Pannalal Lathi, 2010 Incorporating new problems and examples the second edition of Linear Systems and Signals features MATLAB material in each chapter and at the back of the book It gives clear descriptions of linear systems and uses mathematics not only to prove axiomatic theory but also to enhance physical and intuitive understanding

Learner-Centered Design of Computing Education Mark Guzdial, 2022-05-31 Computing education is in enormous demand Many students both children and adult are realizing that

they will need programming in the future This book presents the argument that they are not all going to use programming in the same way and for the same purposes What do we mean when we talk about teaching everyone to program When we target a broad audience should we have the same goals as computer science education for professional software developers How do we design computing education that works for everyone This book proposes use of a learner centered design approach to create computing education for a broad audience It considers several reasons for teaching computing to everyone and how the different reasons lead to different choices about learning goals and teaching methods The book reviews the history of the idea that programming isn't just for the professional software developer It uses research studies on teaching computing in liberal arts programs to graphic designers to high school teachers in order to explore the idea that computer science for everyone requires us to re think how we teach and what we teach The conclusion describes how we might create computing education for everyone

Mathematics Education in the Age of Artificial Intelligence

Philippe R. Richard, M. Pilar Vélez, Steven Van Vaerenbergh, 2022-03-09 This book highlights the contribution of artificial intelligence for mathematics education It provides concrete ideas supported by mathematical work obtained through dynamic international collaboration and discusses the flourishing of new mathematics in the contemporary world from a sustainable development perspective Over the past thirty years artificial intelligence has gradually infiltrated all facets of society When it is deployed in interaction with the human designer or user AI certainly raises new ethical questions But as soon as it aims to augment intelligence in a kind of human machine partnership it goes to the heart of knowledge development and the very performance of work The proposed themes and the sections of the book address original issues relating to the creation of AI milieus to work on mathematics to the AI supported learning of mathematics and to the coordination of usual paper pencil techniques and new AI aided educational working spaces The authors of the book and the coordinators of each section are all established specialists in mathematics didactics mathematics and computer science In summary this book is a must read for everyone interested in the teaching and learning of mathematics and it concerns the interaction between the human and the machine in both directions It contains ideas questions and inspiration that invite to take up the challenge of Artificial Intelligence contributing to Mathematical Human Learning
