

To install Maven on a FreeBSD or OpenBSD machine, follow the exact procedure outlined in Section 2.3.1, “Installing Maven on Mac OSX”.

2.4. Testing a Maven Installation

Once Maven is installed, you can check the version by running `mvn -v` from the command-line. If Maven has been installed, you should see something resembling the following output.

```
S: mvn -v
Maven: 2.0.10
```

If you see this output, you know that Maven is available and ready to be used. If you do not see this output, and your operating system cannot find the `mvn` command, make sure that your `PATH` environment variable and `M2_HOME` environment variable have been properly set.

2.5. Maven Installation Details

Maven’s download measures in at roughly 1.5 MiB³, it has attained such a slim download size because the core of Maven has been designed to retrieve plugins and dependencies from a remote repository on-demand. When you start using Maven, it will start to download plugins to a local repository described in Section 2.5.1, “User-specific Configuration and Repository”. In case you are curious, let’s take a quick look at what is in Maven’s installation directory.³

```
/usr/local/maven $ ls -pl
LICENSE.txt
NOTICE.txt
README.txt
bin/
boot/
```

³Ever purchased a 200 GB hard drive only to realize that it showed up as less than 200 GiB when you installed it? Computers understand Gibibytes, but retailers sell products using Gigabytes. MiB stands for Mebibyte which is defined as 2^{20} or 1024^2 . These binary prefix standards are endorsed by the IEEE, CIPM, and IEC. For more information about Kibibytes, Mebibytes, Gibibytes, and Tebibytes see <http://en.wikipedia.org/wiki/Mebibyte>.
