Principles Of Data Mining Adaptive Computation And Machine Learning Series:

　Principles of Data Mining David J. Hand,Heikki Mannila,Padhraic Smyth,2001-08-17 The first truly interdisciplinary text on data mining blending the contributions of information science computer science and statistics The growing interest in data mining is motivated by a common problem across disciplines how does one store access model and ultimately describe and understand very large data sets Historically different aspects of data mining have been addressed independently by different disciplines This is the first truly interdisciplinary text on data mining blending the contributions of information science computer science and statistics The book consists of three sections The first foundations provides a tutorial overview of the principles underlying data mining algorithms and their application The presentation emphasizes intuition rather than rigor The second section data mining algorithms shows how algorithms are constructed to solve specific problems in a principled manner The algorithms covered include trees and rules for classification and regression association rules belief networks classical statistical models nonlinear models such as neural networks and local memory based models The third section shows how all of the preceding analysis fits together when applied to real world data mining problems Topics include the role of metadata how to handle missing data and data preprocessing　**Handbook of Computational Statistics** James E. Gentle,Wolfgang Karl Härdle,Yuichi Mori,2012-07-06 The Handbook of Computational Statistics Concepts and Methods second edition is a revision of the first edition published in 2004 and contains additional comments and updated information on the existing chapters as well as three new chapters addressing recent work in the field of computational statistics This new edition is divided into 4 parts in the same way as the first edition It begins with How Computational Statistics became the backbone of modern data science Ch 1 an overview of the field of Computational Statistics how it emerged as a separate discipline and how its own development mirrored that of hardware and software including a discussion of current active research The second part Chs 2 15 presents several topics in the supporting field of statistical computing Emphasis is placed on the need for fast and accurate numerical algorithms and some of the basic methodologies for transformation database handling high dimensional data and graphics treatment are discussed The third part Chs 16 33 focuses on statistical methodology Special attention is given to smoothing iterative procedures simulation and visualization of multivariate data Lastly a set of selected applications Chs 34 38 like Bioinformatics Medical Imaging Finance Econometrics and Network Intrusion Detection highlight the usefulness of computational statistics in real world applications　Large-Scale Machine Learning in the Earth Sciences Ashok N. Srivastava,Ramakrishna Nemani,Karsten Steinhaeuser,2017-08-01 From the Foreword While large scale machine learning and data mining have greatly impacted a range of commercial applications their use in the field of Earth sciences is still in the early stages This book edited by Ashok Srivastava Ramakrishna Nemani and Karsten Steinhaeuser serves as an outstanding resource for anyone interested in the opportunities and challenges for the machine learning community in analyzing these data sets to answer questions of urgent societal interest I hope that this book

will inspire more computer scientists to focus on environmental applications and Earth scientists to seek collaborations with researchers in machine learning and data mining to advance the frontiers in Earth sciences Vipin Kumar University of Minnesota Large Scale Machine Learning in the Earth Sciences provides researchers and practitioners with a broad overview of some of the key challenges in the intersection of Earth science computer science statistics and related fields It explores a wide range of topics and provides a compilation of recent research in the application of machine learning in the field of Earth Science Making predictions based on observational data is a theme of the book and the book includes chapters on the use of network science to understand and discover teleconnections in extreme climate and weather events as well as using structured estimation in high dimensions The use of ensemble machine learning models to combine predictions of global climate models using information from spatial and temporal patterns is also explored The second part of the book features a discussion on statistical downscaling in climate with state of the art scalable machine learning as well as an overview of methods to understand and predict the proliferation of biological species due to changes in environmental conditions The problem of using large scale machine learning to study the formation of tornadoes is also explored in depth The last part of the book covers the use of deep learning algorithms to classify images that have very high resolution as well as the unmixing of spectral signals in remote sensing images of land cover The authors also apply long tail distributions to geoscience resources in the final chapter of the book   Marketing and Smart Technologies José Luís Reis,Jiří Zelený,Beáta Gavurová,José Paulo Marques dos Santos,2024-06-03 This book includes selected papers presented at the International Conference on Marketing and Technologies ICMarkTech 2023 held at Faculty of Economics and Management FEM Czech University of Life Sciences Prague CZU in partnership with University College Prague UCP in Prague Czech Republic between 30 November and 2 December 2023 It covers up to date cutting edge research on artificial intelligence applied in marketing virtual and augmented reality in marketing business intelligence databases and marketing data mining and big data marketing data science web marketing e commerce and v commerce social media and networking geomarketing and IoT marketing automation and inbound marketing machine learning applied to marketing customer data management and CRM and neuromarketing technologies   *Probabilistic Graphical Models* Daphne Koller,Nir Friedman,2009-07-31 A general framework for constructing and using probabilistic models of complex systems that would enable a computer to use available information for making decisions Most tasks require a person or an automated system to reason to reach conclusions based on available information The framework of probabilistic graphical models presented in this book provides a general approach for this task The approach is model based allowing interpretable models to be constructed and then manipulated by reasoning algorithms These models can also be learned automatically from data allowing the approach to be used in cases where manually constructing a model is difficult or even impossible Because uncertainty is an inescapable aspect of most real world applications the book focuses on probabilistic models which make the uncertainty explicit and provide models that

are more faithful to reality Probabilistic Graphical Models discusses a variety of models spanning Bayesian networks undirected Markov networks discrete and continuous models and extensions to deal with dynamical systems and relational data For each class of models the text describes the three fundamental cornerstones representation inference and learning presenting both basic concepts and advanced techniques Finally the book considers the use of the proposed framework for causal reasoning and decision making under uncertainty The main text in each chapter provides the detailed technical development of the key ideas Most chapters also include boxes with additional material skill boxes which describe techniques case study boxes which discuss empirical cases related to the approach described in the text including applications in computer vision robotics natural language understanding and computational biology and concept boxes which present significant concepts drawn from the material in the chapter Instructors and readers can group chapters in various combinations from core topics to more technically advanced material to suit their particular needs *Data Science and Cases in Sustainability* Ashish Ghosh,2026-01-01 This book discusses the fascinating world of data science and cases in sustainability focusing on topics related to pattern recognition and machine learning emphasizing applications that directly address topics related to SDG 9 Industry Innovation and Infrastructure Recognizing the sustainable applications of big data this text emphasizes the shift from traditional statistical analyses to more sophisticated methods Each of these techniques pattern recognition and machine learning plays a crucial role in extracting hidden knowledge from vast amount of data Targeted to students researchers and professionals it highlights the multidisciplinary and sustainable nature of the field and showcasing real world applications and equips the readers to navigate the data driven future The first of the two volumes the book highlights the multidisciplinary nature of data science in the fields of computer science statistics physics and economics It meticulously guides its readers through the data science workflow covering data collection preparation storage analysis management and visualization It highlights specific techniques and algorithms used in each of the above mentioned stages and offers explanations of major learning mechanisms dimensionality reduction classification clustering and outlier analysis Additionally it sheds light on the modern field of deep learning and unfolds the complexity of its mechanism with explanation Case studies showcase the practical applications and successes of data science across various domains Principles of Data Mining Max Bramer,2016-11-09 This book explains and explores the principal techniques of Data Mining the automatic extraction of implicit and potentially useful information from data which is increasingly used in commercial scientific and other application areas It focuses on classification association rule mining and clustering Each topic is clearly explained with a focus on algorithms not mathematical formalism and is illustrated by detailed worked examples The book is written for readers without a strong background in mathematics or statistics and any formulae used are explained in detail It can be used as a textbook to support courses at undergraduate or postgraduate levels in a wide range of subjects including Computer Science Business Studies Marketing Artificial Intelligence Bioinformatics and Forensic Science As an aid to self

study this book aims to help general readers develop the necessary understanding of what is inside the black box so they can use commercial data mining packages discriminatingly as well as enabling advanced readers or academic researchers to understand or contribute to future technical advances in the field Each chapter has practical exercises to enable readers to check their progress A full glossary of technical terms used is included This expanded third edition includes detailed descriptions of algorithms for classifying streaming data both stationary data where the underlying model is fixed and data that is time dependent where the underlying model changes from time to time a phenomenon known as concept drift
