Situated Language and Learning James Paul Gee, 2012-10-02 Why do poor and minority students underperform in school? Do computer games help or hinder learning? What can new research in psychology teach our educational policy makers? In this major new book, Gee tackles the big ideas about language, literacy, and learning, putting forward an integrated theory that crosses disciplinary boundaries and applying it to some of the very real problems that face educationalists today. *Situated Language*

and Learning looks at the specialist academic varieties of language that are used in disciplines such as mathematics and the sciences It argues that the language acquisition process needed to learn these forms of language is not given enough attention by schools and that this places unfair demands on poor and minority students The book compares this with learning as a process outside the classroom applying this idea to computer and video games and exploring the particular processes of learning which take place as a child interacts with others and technology to learn and play In doing so Gee examines what video games can teach us about how to improve learning in schools and engages with current debates on subjects such as communities of practice and digital literacies Bringing together the latest research from a number of disciplines Situated Language and Learning is a bold and controversial book by a leading figure in the field and is essential reading for anyone interested in education and language

Elsevier Inc, Kathy Bonewit-West, 2007-04. Gain realistic experience in a physician's office without leaving the classroom. By using Elsevier's Virtual Medical Office learning system, an Elsevier textbook, a study guide, and interactive software, students develop critical thinking and decision making skills they'll need in their externships and on the job. In Virtual Medical Office, students experience patient care from check in through check out, exploring all national curriculum competencies. It shows how to manage different patients and why. Each study guide lesson directs the student through the textbook and software and presents exercises focused on one or two medical assisting competencies at a time based on what they experience. Realistic software simulations of handling a difficult patient, setting up the exam room, and many more bridge the gap between the classroom and the real world. 15 unique cases promote understanding of how the competencies established by ABHES Accrediting Bureau of Health Education Schools and CAAHEP Commission on Accreditation of Allied Health Education Programs come into play in the workplace. More than two hours of video clips highlight the communication and professionalism competencies of patient care. Realistic information resources are shown such as medical records for each case, an office policy manual, a fee schedule, a daysheet, and more.
