Solidification Processing Merton C. Flemings,1974 *Proceedings of the Merton C. Flemings Symposium on Solidification and Materials Processing* Merton C. Flemings,2001 This text comprises a collection of papers from the Merton C Flemings Symposium held on the MIT campus in June 2000 The papers cover such topics as dendritic solidification dynamics control of casting quality interdendritic fluid flow semi solid processing and engineering education *Rapid Solidification Processing: Principles and Technologies II*. R. (ed.) Mehrabian,2013 *F. Weinberg International Symposium on Solidification Processing* J. E. Lait,I. V. Samarasekera,2013-10-22 This international symposium is in honour of Professor F Weinberg who will be retiring from the University of British Columbia this year following a distinguished career Six sessions have been organized on Fundamentals of Solidification Non ferrous Casting Processes Continuous and Static Casting of Cast Iron Novel Solidification Studies and Semiconductor and Optoelectronic Crystal Growth addressing the state of the art in each of these areas Keynote speakers for the six sessions are Dr K Jackson Dr N Bryson Prof H A Frederiksson Prof I Minkoff Prof M C Flemings and Prof R Brown **Rapid Solidification Processing** Robert Mehrabian,Phillip A. Jacobson,1994 *Eutectic Solidification Processing* Roy Elliott,2013-10-22 Eutectic Solidification Processing Crystalline and Glassy Alloys deals with solidification theory and its application to eutectic processing of crystalline and glassy alloys The underlying theme is an analysis of the different paths taken by the liquid solid transformation as the cooling rate increases and a description of the structure and properties of the solid formed ranging from equilibrium to metastable phase formation in castings to metallic glass formation in splat quenched ribbons This text has seven chapters the first of which describes the main characteristics of the liquid solid transformation The chapters that follow show how control over composition trace impurities heat flow and cooling rate and nucleation and growth gives rise to a wide range of solidification structures Models of the nucleation and growth of eutectic and primary phases are analyzed and used to explain how cast microstructures are formed Aluminum casting alloys and all types of cast iron are discussed along with primary phase formation the dependence of the extent of segregation on solidification conditions and the practice of segregation prevention during solidification This book also describes the importance of fluid flow in producing macroscopic segregation in large ingots and considers ways of minimizing this defect Finally this book gives a brief account of the various types of metallic glasses their fabrication important properties and potential applications This book will be of interest to materials scientists and industrial materials engineers Rapid Solidification Processing Robert Mehrabian,B.
