Department of the Army,1998 *Pentimento Trap* Julian Harrow,2026-02-22 Eamon Gable is a senior art conservator whose meticulous life is dedicated to uncovering the truth beneath layers of paint Working the night shift alone in a subterranean climate controlled museum vault he begins analyzing a newly acquired 16th century masterpiece But when Eamon runs an infrared scan the hidden underpainting a pentimento reveals a terrifying truth it is a modern dynamically updating blueprint of the very vault he is locked inside As a thermal blip on the monitor moves closer to his impenetrable lab Eamon discovers the canvas is a highly advanced synthetic forgery

designed to hijack the room's sensors and deadbolt the doors. Framed by a corrupt museum director for the theft of the real masterpiece, Eamon realizes the approaching intruder isn't coming to fight; they are coming to trigger the vault's Halon gas fire suppression system and suffocate him without leaving a trace. Trapped behind blast doors as the oxygen is slowly vacuumed away, Eamon must weaponize his own restoration chemicals. In a desperate bid for survival, he ignites the forged painting with acetone and ethanol, causing a massive chemical blaze that forces the facility's emergency fail safes to blast the exterior doors open. Armed with a respirator mask and the digital scans that prove his innocence, Eamon must escape the deadly backdraft before the vault becomes his tomb.

Gottuk, 1998    **Electrical & Electronics Abstracts**, 1997    *Aircraft Cargo Compartment Multisensor Smoke Detection Algorithm Development* Adityanand Girdhari, 2008

There is a need to effectively develop and test an advanced fire detection system for aircraft cargo compartments that significantly reduces false alarms and improves alarm time response. Title 14 Code of Federal Regulations Part 25.858 requires that aircraft detection systems alarm within 1 minute of the start of a fire. Gas concentrations, temperature fluctuations, and particulate levels are three main parameters representative of a complete fire signature. Current aircraft detection systems depend solely on one parameter: particulate levels for the detection of this wide fire signature. Improved fire detection capabilities can be achieved by combining multiple fire signatures or parameters in specific algorithms. An advanced fire detection system combining an ionization smoke detector, thermocouple, smoke meter, and a carbon monoxide (CO), carbon dioxide (CO<sub>2</sub>) gas probe was installed in a Boeing 707 forward cargo compartment. A broad spectrum of fire and nuisance sources were tested to produce a matrix of extreme detector levels from all four sensors. This matrix provided alarm threshold criteria that aided in the development of a multisensor algorithm based on fire signatures such as CO and CO<sub>2</sub> gas concentrations, temperature, ionization chamber voltage, and percent light transmission per foot. Multiple algorithms were created to determine the most effective multisensor algorithm that responded the fastest to fires while providing nuisance immunity.

**Prototype Early Warning Fire Detection System: Test Series 3 Results**, 2001

This work is a continuation of a multi-year effort to develop an early warning fire detection system (EWFD) that is immune to nuisance alarms. The work was conducted under the Office of Naval Research-sponsored program Damage Control Automation for Reduced Manning (DC-ARM) as part of a smart system capable of providing automated damage control. Over the past two years, efforts have focused on identifying appropriate sensors and candidate multivariate alarm algorithms. The results of this test series have demonstrated improved performance of the current probabilistic neural networks (PNN) alarm algorithm compared to previous prototype designs, as well as alternate sensor/PNN combinations evaluated in this work. The current alarm algorithm resulted in better overall performance than the commercial smoke detectors by providing both improved nuisance source

immunity with generally equivalent or faster response times Areas of improvement have been identified In particular it is believed that the prototypes can be made to respond faster to long smoldering fires **The Software Encyclopedia** ,1988
