Solving the Powertrain Puzzle Schaeffler Technologies GmbH & Co. KG,2014-09-12 Every four years Schaeffler provides an insight into its latest developments and technologies from the engine transmission and chassis as well as hybridization and electric mobility sectors In 2014 the Schaeffler Symposium with the motto Solving the Powertrain Puzzle took place from 3th to 4th of April in Baden Baden Mobility for tomorrow is the central theme of this proceeding The authors are discussing the different requirements which are placed on mobility in different regions of the world In addition to the company s work in research and development a comprehensive in house mobility study also provides a reliable basis for the discussion The authors are convinced that there will be a paradigm shift in the automotive industry Issues such as increasing efficiency and advancing electrification of the powertrain automatic and semi automatic driving as well as integration in information networks will define the automotive future In addition the variety of solutions available worldwide will become increasingly more complex and mobility patterns will also change rapidly However this does not mean that cars will drive virtually in the future Powertrains based on internal combustion engines will still dominate for a very long time and demonstrate new strengths in combination with hybrid drives Transmissions will also gain in importance as the link between the internal combustion engine and electric motor The proceeding Solving the Powertrain Puzzle contains 34 technical papers from renowned experts and researchers in the field of automotive engineering

Racing Toward Zero Kelly Senecal,Felix Leach,2021-06-01 In *Racing Toward Zero* the authors explore the issues inherent in developing sustainable transportation They review the types of propulsion systems and vehicle options discuss low carbon fuels and alternative energy sources and examine the role of regulation in curbing emissions All technologies have an impact on the environment from internal combustion engine vehicles to battery electric vehicles fuel cell electric vehicles and hybrids there is no silver bullet The battery electric vehicle may seem the obvious path to a sustainable carbon free transportation future but it s not the only nor necessarily the best path forward The vast majority of vehicles today use the internal combustion engine ICE and this is unlikely to change anytime soon Improving the ICE and its fuels entering a new ICE age must be a main route on the road to zero emissions How do we go green The future requires a balanced approach to transportation It s not a matter of choosing between combustion or electrification it s combustion and electrification As the authors say The future is eclectic By harnessing the best qualities of both technologies we will be in the best position to address our transportation future as quickly as possible ISBN 9781468601466 ISBN 9781468601473 ISBN 9781468602005 DOI 10 4271 9781468601473
