Probabilistic Analysis of Packing and Partitioning Algorithms Edward Grady Coffman, George S. Lueker, 1991 This volume examines two important classes that are characteristic of combinatorial optimization problems sequencing and scheduling in which a set of objects has to be ordered subject to a number of conditions and packing and partitioning in which a set of objects has to be split into subsets in order to meet a certain objective These classes of problems encompass a wide range of practical applications from production planning and flexible manufacturing to computer scheduling and

Algorithms M. H. Alsuwaiyel, 1999 Problem solving is an essential part of every scientific discipline It has two components 1 problem identification and formulation and 2 solution of the formulated problem One can solve a problem on its own using ad hoc techniques or follow those techniques that have produced efficient solutions to similar problems This requires the understanding of various algorithm design techniques how and when to use them to formulate solutions and the context appropriate for each of them This book advocates the study of algorithm design techniques by presenting most of the useful algorithm design techniques and illustrating them through numerous examples
