

Chapter 25: The History of Life on Earth

- 25.1 Describe steps by which simple cells may have originated from nonliving materials.
- 25.2 Explain what fossils are, how they are dated, and what the fossil record can reveal about life's history.
- 25.3 Identify when the origin of single and multicelled organisms and the colonization of land occurred, and explain the significance of these events.
- 25.4 Explain how plate tectonics, mass extinctions, and adaptive radiations have affected Earth's life.
- 25.5 Describe how changes in the sequence or regulation of genes can result in major changes in body form.
- 25.6 Use examples to show how novel and complex structures can arise by descent with modification.

How could the first organic molecules have formed? What were the earliest life-forms? How did eukaryotic cells evolve? How did life move from the water to land? This chapter looks at evidence to support hypotheses about the origins and development of life on Earth. Pay attention to the many ways the history of life on our planet is explained by natural processes.
