**BIOSPERATIONS** B. SIVASANKAR, 2005-01-01 This systematically organized and well balanced book compresses within the covers of a single volume the theoretical principles and techniques involved in bio separations also called downstream processing These techniques are derived from a range of subjects for example physical chemistry analytical chemistry bio chemistry biological science and chemical engineering Organized in its 15 chapters the text covers in the first few chapters topics related to chemical engineering unit operations such as filtration centrifugation adsorption extraction and membrane separation as applied to bioseparations The use of chromatography as practiced at laboratory as well as industrial scale operation and related techniques such as gel filtration affinity and pseudoaffinity chromatography ion exchange chromatography electrophoresis and related methods have been discussed The important applications of these techniques have also been highlighted

**Transport Phenomena Fundamentals** Joel L. Plawsky, 2001-04-25 This volume is organized to highlight the parallels and the differences between the transport phenomena It facilitates comprehension and retention of basic momentum heat mass and charge transport processes and properties and features a balance equation format based on systematic addition and analysis of each term in the balance equation There are more than 1300 equations and end of chapter problems are provided to reinforce important text material

Process Equipment and Plant Design Subhabrata Ray, Gargi Das, 2020-05-29 *Process Equipment and Plant Design Principles and Practices* takes a holistic approach towards process design in the chemical engineering industry dealing with the design of individual process equipment and its configuration as a complete functional system Chapters cover typical heat and mass transfer systems and equipment included in a chemical engineering curriculum such as heat exchangers heat exchanger networks evaporators distillation absorption adsorption reactors and more The authors expand on additional topics such as industrial cooling systems extraction and topics on process utilities piping and hydraulics including instrumentation and safety basics that supplement

the equipment design procedure and help to arrive at a complete plant design The chapters are arranged in sections pertaining to heat and mass transfer processes reacting systems plant hydraulics and process vessels plant auxiliaries and engineered safety as well as a separate chapter showcasing examples of process design in complete plants This comprehensive reference bridges the gap between industry and academia while exploring best practices in design including relevant theories in process design making this a valuable primer for fresh graduates and professionals working on design projects in the industry Serves as a consolidated resource for process and plant design including process utilities and engineered safety Bridges the gap between industry and academia by including practices in design and summarizing relevant theories Presents design solutions as a complete functional system and not merely the design of major equipment Provides design procedures as pseudo code flow chart along with practical considerations

**Biological and Bioenvironmental Heat and Mass Transfer** Ashim K. Datta, 2002-03-21 Providing a foundation in heat and mass transport this book covers engineering principles of heat and mass transfer The author discusses biological content context and parameter regimes and supplies practical applications for biological and biomedical engineering industrial food processing environmental control and waste management The book contains end of chapter problems and sections highlighting key concepts and important terminology It offers cross references for easy access to related areas and relevant formulas as well as detailed examples of transport phenomena and descriptions of physical processes It covers mechanisms of diffusion capillarity convection and dispersion
