Radiotherapy in Practice Peter J. Hoskin, 2006 External beam therapy is the most common form of radiotherapy delivering ionizing radiation such as high energy x rays gamma rays or electron beams directly into the location of the patient's tumour The beam is generated externally with no radioactive sources placed within the patient's body The beams aim at destroying the cancer cells with minimal impact on the surrounding healthy tissue The radiation oncologist will choose between different ways of administering the beams such as linear accelerators cobalt machines or ortho voltage x ray machines The three distinct stages of simulation planning and treatment are critical to ensuring the highest rate of success This book is an essential practical guide to the use of external beam radiotherapy highlighting the rapid technological advances made in recent years *The Modern Technology of Radiation Oncology* Jake Van Dyk, 1999 Details technology associated with radiation oncology emphasizing design of all equipment allied with radiation treatment Describes procedures required to implement equipment in clinical service covering needs assessment purchase acceptance and commissioning and explains quality assurance issues Also addresses less common and evolving technologies For medical physicists and radiation oncologists as well as radiation therapists dosimetrists and engineering technologists Includes bandw medical images and photos of equipment Paper edition unsewn 145 95 Annotation copyrighted by Book News Inc Portland OR
