Organic Structures from Spectra L. D. Field, H. L. Li, A. M. Magill, 2020-04-22 The derivation of structural information from spectroscopic data is now an integral part of organic chemistry courses at all Universities A critical part of any such course is a suitable set of problems to develop the students understanding of how organic structures are determined from spectra The book builds on the very successful teaching philosophy of learning by hands on problem solving carefully graded examples build confidence and develop and consolidate a student s understanding of organic spectroscopy *Organic Structures from Spectra* 6th Edition is a carefully chosen set of about 250 structural problems employing the major modern spectroscopic techniques including Mass Spectrometry 1D and 2D ¹³C and ¹H NMR Spectroscopy and Infrared Spectroscopy There are 25 problems specifically dealing with the interpretation of spin spin coupling in proton NMR spectra and 10 problems based on the quantitative analysis of mixtures using proton and carbon NMR spectroscopy The accompanying text is descriptive and only explains the underlying theory at a level that is sufficient to tackle the problems The text includes condensed tables of characteristic spectral properties covering the frequently encountered functional groups The examples themselves have been selected to include all important structural features and to emphasise connectivity arguments and stereochemistry Many of the compounds were synthesised specifically for this book In this collection there are many additional easy problems designed to build confidence and to demonstrate basic principles The Sixth Edition of this popular textbook now incorporates many new problems using 2D NMR spectra C H Correlation spectroscopy HMBC COSY NOESY and TOCSY has been expanded and updated to reflect the new developments in NMR spectroscopy has an additional 40 carefully selected basic problems provides a set of problems dealing specifically with the quantitative analysis of mixtures using NMR spectroscopy features proton NMR spectra obtained at 200 400 and 600 MHz and ¹³C NMR spectra including routine 2D C H correlation HMBC spectra and DEPT spectra contains a selection of problems in the style of the experimental section of a research paper includes examples of fully worked solutions in the appendix has a complete set of solutions available to instructors and teachers from the authors *Organic Structures from Spectra* Sixth Edition will prove invaluable for students of Chemistry Pharmacy and Biochemistry taking a first course in Organic Chemistry

Organic Structures from Spectra L. D. Field, S. Sternhell, John R. Kalman, 2011-09-07 *Organic Structures from Spectra* Fourth Edition consists of a carefully selected set of over 300 structural problems involving the use of all the major spectroscopic techniques The problems are graded to develop and consolidate the student s understanding of Organic Spectroscopy with the accompanying text outlining the basic theoretical aspects of major spectroscopic techniques at a level sufficient to tackle the problems Specific changes for the new edition will include A significantly expanded section on 2D NMR spectroscopy focusing on COSY NOESY and CH Correlation Incorporating new material into some tables to provide extra characteristic data for various classes of compounds Additional basic information on how to solve spectroscopic

problems Providing new problems within the area of 10 2D NMR spectroscopy More problems at the simpler end of the range As with previous editions this book combines basic theory practical advice and sensible approaches to solving spectra problems It will therefore continue to prove invaluable to students studying organic spectroscopy across a range of disciplines

Organic Structures from Spectra L. D. Field, S. Sternhell, J. R. Kalman, 2013-02-18 The derivation of structural information from spectroscopic data is now an integral part of organic chemistry courses at all Universities A critical part of any such course is a suitable set of problems to develop the student's understanding of how structures are determined from spectra Organic Structures from Spectra Fifth Edition is a carefully chosen set of more than 280 structural problems employing the major modern spectroscopic techniques a selection of 27 problems using 2D NMR spectroscopy more than 20 problems specifically dealing with the interpretation of spin-spin coupling in proton NMR spectra and 8 problems based on the quantitative analysis of mixtures using proton and carbon NMR spectroscopy All of the problems are graded to develop and consolidate the student's understanding of organic spectroscopy The accompanying text is descriptive and only explains the underlying theory at a level which is sufficient to tackle the problems The text includes condensed tables of characteristic spectral properties covering the frequently encountered functional groups The examples themselves have been selected to include all important common structural features found in organic compounds and to emphasise connectivity arguments Many of the compounds were synthesised specifically for this purpose There are many more easy problems to build confidence and demonstrate basic principles than in other collections The fifth edition of this popular textbook includes more than 250 new spectra and more than 25 completely new problems now incorporates an expanded suite of new problems dealing with the analysis of 2D NMR spectra COSY C-H Correlation spectroscopy HMBC NOESY and TOCSY has been expanded and updated to reflect the new developments in NMR and to retire older techniques that are no longer in common use provides a set of problems dealing specifically with the quantitative analysis of mixtures using NMR spectroscopy features proton NMR spectra obtained at 200 400 and 600 MHz and ¹³C NMR spectra include DEPT experiments as well as proton coupled experiments contains 6 problems in the style of the experimental section of a research paper and two examples of fully worked solutions Organic Structures from Spectra Fifth Edition will prove invaluable for students of Chemistry Pharmacy and Biochemistry taking a first course in Organic Chemistry Contents Preface Introduction Ultraviolet Spectroscopy Infrared Spectroscopy Mass Spectrometry Nuclear Magnetic Resonance Spectroscopy 2DNMR Problems Index Reviews from earlier editions Your book is becoming one of the go to books for teaching structure determination here in the States Great work I would definitely state that this book is the most useful aid to basic organic spectroscopy teaching in existence and I would strongly recommend every instructor in this area to use it either as a source of examples or as a class textbook Magnetic Resonance in Chemistry Over the past year I have trained many students using problems in your book they initially find it as a task But after doing 3-4 problems with all their brains activities working out the rest of the problems

become a mania They get addicted to the problem solving and every time they solve a problem by themselves their confident level also increases I am teaching the fundamentals of Molecular Spectroscopy and your books represent excellent sources of spectroscopic problems for students
