This book is composed of selected papers from the Sixteenth National Conference on Operational and Systems Research BOS 2020 held on December 14 15 2020 one of premiere conferences in the field of operational and systems research The second is the Nineteenth International Workshop on Intuitionistic Fuzzy Sets and Generalized Nets IWIFSGN 2020 held on December 10 11 2020 in Warsaw Poland in turn one of premiere conferences on fuzzy logic notably on extensions of the traditional fuzzy sets also comprising a considerable part on the generalized nets GNs an important extension of the traditional Petri nets A joint publication of selected papers from the two conferences follows a long tradition of such a joint organization and from a substantial point of view combines systems modeling systems analysis broadly perceived operational research notably optimization decision making and decision support with various aspects of uncertain and imprecise information and their related tools and techniques

Theoretical and Experimental Methods for Defending Against DDoS Attacks Iraj Sadegh Amiri, Mohammad Reza Khalifeh Soltanian, 2015-11-10 Denial of Service DoS attacks are a form of attack that seeks to make a network resource unavailable due to overloading the resource or machine with an overwhelming number of packets thereby crashing or severely slowing the performance of the resource Distributed Denial of Service DDoS is a large scale DoS attack which is distributed in the Internet Every computer which has access to the Internet can behave as an attacker Typically bandwidth depletion can be categorized as either a flood or an amplification attack Flood attacks can be done by generating ICMP packets or UDP packets in which it can utilize stationary or random variable ports Smurf and Fraggle attacks are used for amplification attacks DDoS Smurf attacks are an example of an amplification attack where the attacker sends packets to a network amplifier with the return address spoofed to the victim s IP address This book presents new research and methodologies along with a proposed algorithm for prevention of DoS attacks that has been written based on cryptographic concepts such as birthday attacks to estimate the rate of attacks generated and passed along the routers Consequently attackers would be identified and prohibited from sending spam traffic to the server which can cause DDoS attacks Due to the prevalence of DoS attacks there has been a lot of research conducted on how to detect them and prevent them The authors of this short format title provide their research results on providing an effective solution to DoS attacks including introduction of the new algorithm that can be implemented in order to deny DoS attacks A comprehensive study on the basics of network security Provides a wide revision on client puzzle theory An experimental model to mitigate distributed denial of service DDoS attacks
