Blaauwendraad,2018-06-26 Structural concrete designers nowadays distinguish between B regions named after Bernoulli beam theory and D regions D standing for disturbed They are all familiar with B regions but less acquainted with the expertise required for D regions To design D regions the Strut and Tie Model STM is usually applied a model laid down worldwide in structural codes of practice The Stringer Panel Model SPM recommended here is a companion method to the STM with the advantage of being suitable for different load cases and reversed loading This being so the SPM is suitable for linear elastic analyses where durability is a key consideration but also suits structural design for contexts of cyclical seismic activity Finally this book sets out how structural engineers who prefer the STM can nevertheless apply the SPM to determine a proper strut and tie model *Civil engineering* ,2006 Advances in Structures Gregory J Hancock,2003 This volume is an outcome of the international conference on advances in structures steel concrete composite and aluminium in Sydney in 2003 It focuses on researches in composite design fire engineering light gauge construction advanced structural analysis and concrete filled tubes **Subject Guide to Books in Print** ,1991
