The Digital Printing Handbook

A photographer's guide to creative printing techniques

Burning-in with colour

Rather than carry a camera bag full of filters to enhance your colour photographs, you can easily apply them retrospectively in Photoshop.

Step 1

This image was taken on colour negative film on a late winter afternoon. Although the light is the key for the mood of the scene, an extra bit of colour might just improve it before starting off the print. Double your red channel when first setting off without a clear print. The idea behind this technique is to introduce an extra bit of red into the sky without looking as if we had fiddled the print.

There's little point trying to print colour directly when the image using any of Photoshop's printing tools, so you will always be working with an end up with noticeable treatments. A much better bet is to make colour balance adjustments with selective areas – just in case you make a mistake, make a duplicate background layer of your image and only use your colouring work on this layer, rather than the more precious original.

Step 2

Use the Lasso tool and draw a very rough selection around the area you want to alter, in this case, the sky. For the purpose of this stage as the selection edge won't be visible. For a convincing effect, try and imagine the most likely place for your colour change to occur. In this example, the house's roofline stands out the best of all areas.

Step 3

Next, to prevent your selective edges being blurry, set lower - opacity and make it about 50 per cent. This will give you the look of a subtle edge effect when burning in a complementary colour channel.

Step 4

Once you've made a selection in Image > Select > Color Balance and increase the quantity of red as shown in the change box below. To avoid burnt edges use the feather option to ease with, but if the effect is needed, by clicking on the highlight option and using the pencil.

Don't try to introduce too much color if you go, but make smaller and smaller corrections, so show above, followed by other channel adjustments.

The end result, shown opposite, has a subtle colour change, rather than an obvious burned effect.
