

# STRUCTURE OF THE HUMAN EYE

Name \_\_\_\_\_

Label the parts of the human eye on the diagram below.

- a. aqueous humor
- b. cornea
- c. pupil
- d. lens
- e. iris
- f. ciliary body
- g. vitreous humor
- h. retina
- i. optic nerve
- j. choroid coat
- k. sclera
- l. suspensory ligament

Fill in the blanks with the correct answers.

Light passes through a transparent layer, the cornea, which begins to focus the light onto the rear of the eye. Light then passes through the lens, the major focusing structure. The lens is held in place by suspending ligaments to ciliary muscles. Contraction of these muscles changes the shape of the lens and thus the focal point. The iris, located between the cornea and the lens, controls the amount of light entering the eye. The iris reduces the size of the transparent zone, or pupil of the eye. The retina, in the back of the eye, contains about 3 million cones which detect color and one billion rods which detect light and dark. The central region of the retina where images are focused is called the fovea. The optic nerve transmits visual impulses directly to the brain. People whose point of focus lies in front of the fovea are said to be Near sighted. If the point of focus lies behind the fovea, they are called far sighted. Corrective lenses may be used to focus the image onto the fovea, thus correcting the condition.

## **The Eye Vision Anatomy Worksheet Answers:**

**A Treatise on the Motor Apparatus of the Eyes** George Thomas Stevens, 1906      **Neuroanatomy** Adam J. Fisch, 2017-08-11  
**Neuroanatomy Draw It to Know It** Third Edition teaches neuroanatomy in a purely kinesthetic way. In using this book, the reader draws each neuroanatomical pathway and structure and in the process creates memorable and reproducible schematics for the various learning points in Neuroanatomy in a hands-on, enjoyable, and highly effective manner. In addition to this unique method, **Neuroanatomy Draw It to Know It** also provides a remarkable repository of reference materials including numerous anatomic and radiographic brain images and illustrations from many other classic texts to enhance the learning experience. In the third edition of this now classic text, the author completely reorganized the book based on user feedback, taking a more intuitive and easy-to-use approach. For the first time, the illustrations are in full color. No other text in neuroanatomy engages the reader in as direct a manner as this book, and none covers the advanced level of detail found while retaining the simplistic approach to the learning which has become the cornerstone of the text. **Neuroanatomy Draw It to Know It** is singular in its ability to engage and instruct without overwhelming any level of neuroanatomy student.      [Neuroanatomy Text and Atlas, Fifth Edition](#) John D. Martin, 2019-12-22  
A regional and functional approach to learning human neuroanatomy, enhanced by additional full-color illustrations and PowerPoint slides of all images in the text for instructors. **Neuroanatomy Text and Atlas** covers neuroanatomy from both a functional and regional perspective to provide an understanding of how the components of the central nervous system work together to sense the world around us, regulate body systems, and produce behavior. This trusted text thoroughly covers the sensory, motor, and integrative skills of the brain and presents an overview of the function in relation to structure and the locations of the major pathways and neuronal integrative regions. **Neuroanatomy Text and Atlas** also teaches readers how to interpret the new wealth of human brain images by developing an understanding of the anatomical localization of brain function. The authoritative core content of myelin-stained histological sections is enhanced by informative line illustrations, angiography, and brain views produced by MRI and other imaging technologies. Revised and updated to reflect advances in clinical neuroanatomy and neural science, full-color illustrations enrich the text, including many new to this edition. Chapters begin with a clinical case to illustrate the connections and functions of the key material. Chapters end with a series of multiple-choice review questions. NEW Online learning center will display brain views produced by MRI and PET. Increases knowledge of the regional and functional organization of the spinal cord and brain, one system at a time. Provides thorough coverage of the sensory, motor, and integrative systems of the brain together with cerebral vasculature. Promotes understanding of the complex details of neuroanatomy needed for accurate interpretation of radiological images. Comprehensive atlas provides key views of the surface anatomy of the central nervous systems and photographs of myelin-stained sections in three anatomical planes. Includes learning aids such as clinical topics boxes, chapter summaries, and a Glossary of key terms and structures.      [The](#)

Ragland,2015-12-11 This volume presents an innovative look at early modern medicine and natural philosophy as historically interrelated developments The individual chapters chart this interrelation in a variety of contexts from the Humanists who drew on Hippocrates Galen and Aristotle to answer philosophical and medical questions to medical debates on the limits and power of mechanism and on to eighteenth century controversies over medical materialism and atheism The work presented here broadens our understanding of both philosophy and medicine in this period by illustrating the ways these disciplines were in deep theoretical and methodological dialogue and by demonstrating the importance of this dialogue for understanding their history Taken together these papers argue that to overlook the medical context of natural philosophy and the philosophical context of medicine is to overlook fundamentally important aspects of these intellectual endeavors The Medium and Daybreak ,1884 **Concepts of Human Anatomy and Physiology** Kent Marshall Van De Graaff,Stuart Ira Fox,1989
