Contemporary America Kristin Haltinner, Leontina Hormel, 2018-01-02 This book discusses pedagogical solutions that enable students to see how capitalist processes and economic inequalities intersect and shape our assumptions and behaviours. The contributors provide thoughtful reflections on the struggles and opportunities instructors face in teaching about these topics while competing against the invisibility of capitalist forces and prevalent social myths such as anyone who works hard can achieve. This book will not only help instructors empower students to recognize economic injustice and its interaction with capitalist organization but also develops and acts on transformative solutions. Through analysis of the classed dimensions of the current political economics and cultural climate as well as presenting novel lesson plans and classroom activities, this book is of great value for college and university professors.

The Making of Green Engineers Andrew Jamison, 2022-06-01 This book discusses the ways in which engineering educators are responding to the challenges that confront their profession. On the one hand, there is an overarching sustainability challenge: the need for engineers to relate to the problems brought to light in the debates about environmental protection, resource depletion, and climate change. There are also a range of societal challenges that are due to the permeation of science and technology into ever more areas of our societies and everyday lives, and finally, there are the intrinsic scientific and technological challenges stemming from the emergence of new fields of technosciences that mix science and technology in new combinations. In the book, the author discusses and exemplifies three contending response strategies on the part of engineers and engineering educators: a commercial strategy that links scientists and engineers into networks or systems of innovation; an academic strategy that reasserts the traditional values of science and engineering; and an integrative strategy that aims to combine scientific knowledge and engineering skills with cultural understanding and social responsibility by fostering what the author terms a hybrid imagination. Professor Jamison combines scholarly analysis with personal reflections, drawing on over forty years of experience as a humanist teaching science and engineering students about the broader social, political, and cultural contexts of their fields. The book has been written as part of the Program of Research on Opportunities and Challenges in Engineering Education in Denmark, PROCEED, funded by the Danish Strategic Research Council, for which Professor Jamison has served as coordinator.

Data Politics Didier Bigo, Engin Isin, Evelyn Ruppert, 2019-03-13 Data has become a social and political issue because of its capacity to reconfigure relationships between states, subjects, and citizens. This book explores how data has acquired such an important capacity and examines how critical interventions in its uses in both theory and practice are possible. Data and politics are now inseparable; data is not only shaping our social relations, preferences, and life chances but our very democracies. Expert international contributors consider political questions about data and the ways it provokes subjects to govern themselves by making rights claims. Concerned with the things, infrastructures of servers, devices, and cables, and language, code, programming, and algorithms that make up cyberspace, this book demonstrates that without understanding these conditions of possibility, it is impossible to intervene in or to shape data politics. Aimed at academics and

postgraduate students interested in political aspects of data this volume will also be of interest to experts in the fields of internet studies international studies Big Data digital social sciences and humanities The Open Access version of this book available at <https://www.routledge.com/Data/Politics/Worlds/Subjects/Rights/Bigo/Isin/Ruppert/p/book/9781138053267> has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license

Alternative Pathways in Science and Industry David J. Hess, 2007 Hess proposes a theory of scientific and technological change that considers the roles of both industry and grassroots consumers in setting the research agenda in science and technology and he identifies alternative pathways by which social movements can influence scientific and technological innovation He analyzes four of these pathways industrial opposition movements organized against targeted technologies as in the campaign against nuclear energy technology and product oriented movements which press for alternatives as does the organic food movement localism which promotes local ownership as in buy local campaigns and access pathways which support a more equitable distribution of resources Within each pathway Hess examines reforms in five areas agriculture energy waste and manufacturing infrastructure and finance Hess's theoretical argument and the empirical evidence he presents demonstrate the complex pattern of incorporation of grassroots innovations and transformation of alternative ownership structures and alternative products that has characterized the relationship of industry and activism
