

Section 2

Three Theories of the Solar System

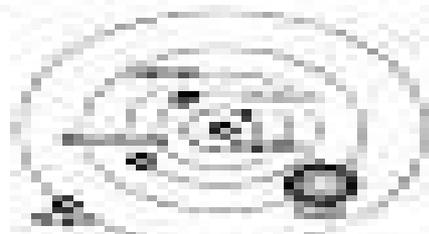

Three theories (geocentric, heliocentric, and tidal) try to describe how the solar system formed.

In the geocentric theory, the Earth is at the center of the solar system. The sun, planets, and moons orbit around it. This theory was developed by ancient Greek astronomer Ptolemy in the 2nd century AD.

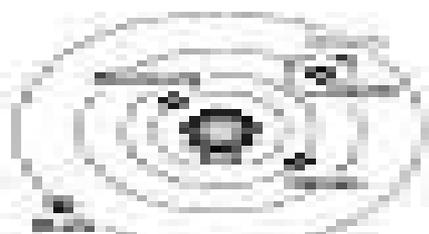

During the 16th century, Copernicus proposed a heliocentric theory where the sun is at the center and the planets orbit around it. This theory was supported by Galileo's observations of the moons of Jupiter and the phases of Venus. In the 17th century, Newton's laws of motion and universal gravitation provided a mathematical framework for these theories.

During the 18th century, Laplace proposed a nebular theory where the solar system formed from a rotating cloud of gas and dust. This theory was supported by Laplace's calculations of the condensation of matter into planets.

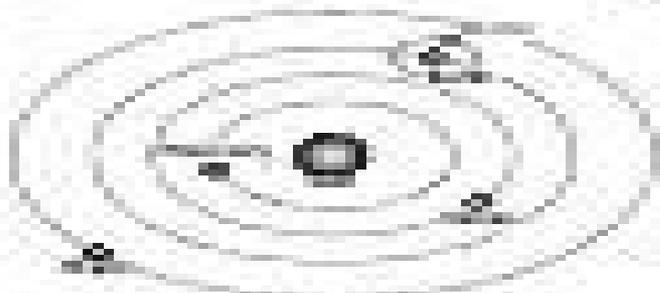

In the 19th century, Darwin proposed a tidal theory where the solar system formed from a passing star that pulled material from the sun. This theory was supported by Darwin's calculations of the tidal forces between the sun and a passing star.
