hexadecimal is often used when developing new software or when trying to trace errors in programs.

A program developer can look at each of the hexadecimal codes (as shown in Figure 1.7 of the textbook) and determine where the error lies. The value on the far left shows the memory location so that it is possible to find out exactly where in memory the fault occurs. [2 marks]

iii HTML code is often used to represent colours of text on the computer screen. The values change to represent different colours. The different intensity of the three primary colours (red, green and blue) is determined by its hexadecimal value. For example:
FF 00 00 represents primary colour red
00 FF 00 represents primary colour green
00 00 FF represents primary colour blue [2 marks]
