Husek, J. van Mill, 2002-11-13 The book presents surveys describing recent developments in most of the primary subfields of General Topology and its applications to Algebra and Analysis during the last decade It follows freely the previous edition North Holland 1992 Open Problems in Topology North Holland 1990 and Handbook of Set Theoretic Topology North Holland 1984 The book was prepared in connection with the Prague Topological Symposium held in 2001 During the last 10 years the focus in General Topology changed and therefore the selection of topics differs slightly from those chosen in 1992 The following areas experienced significant developments Topological Groups Function Spaces Dimension Theory Hyperspaces Selections Geometric Topology including Infinite Dimensional Topology and the Geometry of Banach Spaces Of course not every important topic could be included in this book Except surveys the book contains several historical essays written by such eminent topologists as R D Anderson W W Comfort M Henriksen S Marde i J Nagata M E Rudin J M Smirnov several reminiscences of L Vietoris are added In addition to extensive author and subject indexes a list of all problems and questions posed in this book are added List of all authors of surveys A Arhangel skii J Baker and K Kunen H Bennett and D Lutzer J Dijkstra and J van Mill A Dow E Glasner G Godefroy G Gruenhage N Hindman and D Strauss L Hola and J Pelant K Kawamura H P Kuenzi W Marciszewski K Martin and M Mislove and M Reed R Pol and H Torunczyk D Repovs and P Semenov D Shakhmatov S Solecki M Tkachenko

Tkachuk, 2011-03-23 The theory of function spaces endowed with the topology of point wise convergence or Cp theory exists at the intersection of three important areas of mathematics topological algebra functional analysis and general topology Cp theory has an important role in the classification and unification of heterogeneous results from each of these areas of research Through over 500 carefully selected problems and exercises this volume provides a self contained introduction to Cp theory and general topology By systematically introducing each of the major topics in Cp theory this volume is designed to bring a dedicated reader from basic topological principles to the frontiers of modern research Key features include A unique problem based introduction to the theory of function spaces Detailed solutions to each of the presented problems and exercises A comprehensive bibliography reflecting the state of the art in modern Cp theory Numerous open problems and directions for further research This volume can be used as a textbook for courses in both Cp theory and general topology as well as a reference guide for specialists studying Cp theory and related topics This book also provides numerous topics for PhD specialization as well as a large variety of material suitable for graduate research

**Encyclopaedia of Mathematics** Michiel Hazewinkel, 2012-12-06 This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathematics It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977 1985 The

annotated translation consists of ten volumes including a special index volume There are three kinds of articles in this ENCYCLOPAEDIA First of all there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible On the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science engineers and teachers of mathematics These articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions The second kind of article of medium length contains more detailed concrete problems results and techniques

**General Systems Theory** Jeffrey Yi-Lin Forrest, 2018-12-19 This book demonstrates the theoretical value and practical significance of systems science and its logic of thinking by presenting a rigorously developed foundation a tool for intuitive reasoning which is supported by both theory and empirical evidence as well as practical applications in business decision making Following a foundation of general systems theory the book presents an applied method to intuitively learn system sciences fundamentals The third and final part examines applications of the yoyo model and the theoretical results developed earlier within the context of problems facing business decision makers by organically combining methods of traditional science the first dimension of science with those of systems science the second dimension as argued by George Klir in the 1990s This text would benefit graduate students researchers or practitioners in the areas of mathematics systems science or engineering economics and business decision science

Papers on General Topology and Applications Eva Coplakova, Klaas Pieter Hart, 1996 Part of an ongoing series this volume discusses continuum theory and dynamics infinite dimensional and geometric topology and set theoretic topology and topology and descriptive set theory

*Handbook of Set-theoretic Topology* Kenneth Kunen, 1984 This Handbook is an introduction to set theoretic topology for students in the field and for researchers in other areas for whom results in set theoretic topology may be

relevant The aim of the editors has been to make it as self contained as possible without repeating material which can easily be found in standard texts The Handbook contains detailed proofs of core results and references to the literature for peripheral results where space was insufficient Included are many open problems of current interest In general the articles may be read in any order In a few cases they occur in pairs with the first one giving an elementary treatment of a subject and the second one more advanced results These pairs are Hodel and Juhaacute sz on cardinal functions Roitman and Abraham Todorccaron evicacute on S and L spaces Weiss and Baumgartner on versions of Martin s axiom and Vaughan and Stephenson on compactness properties
