

GENETIC ENGINEERING

It involves the use of molecular techniques to modify the traits of a target organism. The modification of traits may involve:

- Introduction of new traits into an organism
- Enhancement of a present trait by increasing the expression of the desired gene
- Enhancement of a present trait by disrupting the inhibition of the desired genes' expression

Why would altering the DNA affect the traits?

Basic Steps of Genetic Engineering

1. Scientists target and identify specific gene.
2. They cut the targeted gene with restriction enzyme.
3. The targeted gene is "spliced" to the DNA of another organism using ligase.
4. The new gene will be inserted in the host cell. Once inside the new cell, the new instruction from the spliced DNA will direct the cell to make new proteins for new function or characteristics.

Genetic Engineering Lesson

Seymour Rosen

Genetic Engineering Lesson:

Right here, we have countless books **Genetic Engineering Lesson** and collections to check out. We additionally pay for variant types and then type of the books to browse. The enjoyable book, fiction, history, novel, scientific research, as with ease as various further sorts of books are readily comprehensible here.

As this Genetic Engineering Lesson, it ends happening physical one of the favored book Genetic Engineering Lesson collections that we have. This is why you remain in the best website to look the amazing books to have.
