Exercises and Solutions in Biostatistical Theory Lawrence Kupper, 2010-11-09 Drawn from nearly four decades of Lawrence L. Kupper's teaching experiences as a distinguished professor in the Department of Biostatistics at the University of North Carolina, *Exercises and Solutions in Biostatistical Theory* presents theoretical statistical concepts, numerous exercises, and detailed solutions that span topics from basic probability to statistical inference. The text links theoretical biostatistical principles to real-world situations, including some of the author's own biostatistical work that has addressed complicated design and analysis issues in the health sciences. This classroom-tested material is arranged sequentially, starting with a chapter on basic probability theory, followed by chapters on univariate distribution theory and multivariate distribution theory. The last two chapters on statistical inference cover estimation theory and hypothesis testing theory. Each chapter begins with an in-depth introduction that summarizes the biostatistical principles needed to help solve the exercises. Exercises range in level of difficulty from fairly basic to more challenging, identified with asterisks. By working through the exercises and detailed solutions in this book, students will develop a deep understanding of the principles of biostatistical theory. The text shows how the biostatistical theory is effectively used to address important biostatistical issues in a variety of real-world settings. Mastering the theoretical biostatistical principles described in the book will prepare students for successful study of higher-level statistical theory and will help them become better biostatisticians. Unlike similar books, this text incorporates many exercises that apply to real-world settings and provides much more.

Pattern Recognition and Signal Processing in Archaeometry: Mathematical and Computational Solutions for Archaeology Papaodysseus, Constantin, 2011-10-31 Computer science, especially pattern recognition, signal processing, and mathematical algorithms, can offer important information about archaeological finds, information that is otherwise undetectable by the human senses and traditional archaeological approaches. *Pattern Recognition and Signal Processing in Archaeometry: Mathematical and Computational Solutions for Archaeology* offers state-of-the-art research in computational pattern recognition and digital archaeometry. Computer science researchers in pattern recognition and machine intelligence will find innovative research methodologies combined to create novel and efficient computational systems offering robust, exact, and reliable performance and results. Archaeologists, conservators, and historians will discover reliable, automated methods for quickly reconstructing archaeological materials and benefit from the application of non-destructive, automated processing of archaeological finds.
