Children's Counting and Concepts of Number Karen C. Fuson, 2012-12-06 For some time now the study of cognitive development has been far and away the most active discipline within developmental psychology Although there would be much disagreement as to the exact proportion of papers published in developmental journals that could be considered cognitive 50% seems like a conservative estimate Hence a series of scholarly books to be devoted to work in cognitive development is especially appropriate at this time The Springer Series in Cognitive Development contains two basic types of books namely edited collections of original chapters by several authors and original volumes written by one author or a small group of authors The flagship for the Springer Series is a serial publication of the advances type carrying the subtitle Progress in Cognitive Development Research Volumes in the Progress sequence are strongly thematic in that each is limited to some well defined domain of cognitive developmental research e g logical and mathematical development semantic development All Progress volumes are edited collections Editors of such books upon consultation with the Series Editor may elect to have their works published either as contributions to the Progress sequence or as separate volumes All books written by one author or a small group of authors will be published as separate volumes within the series is being used in the selection of books for this series

Cultural Number Systems Karenleigh A. Overmann, 2025-04-26 This sourcebook presents an extensive look at cultural number systems in numeracy and writing systems Based on a decade of research by the author the work examines topics such as why Xerxes the First counted his army by having his men march through an enclosure big enough to hold 10 000 of them at a time why the Hawaiian word for twenty means nine and two why an ancient Greek mathematician was driven mad by irrational numbers and how old counting might be and how we might know this Along the way the author describes topics such as dactylonomy the ancient art of expressing and calculating numbers with the fingers specified counting the use of different counting sequences to count different types of objects and the ephemeral abacus strategies for counting that involve people and goods but not an actual device The chapters are organized into six geographical areas the ancient Near East Africa Europe Asia India Oceania and the Americas
