*Numerical Linear Algebra* Lloyd N. Trefethen, David Bau, III, 1997-06-01 Numerical Linear Algebra is a concise insightful and elegant introduction to the field of numerical linear algebra

[PETSc for Partial Differential Equations: Numerical Solutions in C and Python](#) Ed Bueler, 2020-10-22 The Portable Extensible Toolkit for Scientific Computation PETSc is an open source library of advanced data structures and methods for solving linear and nonlinear equations and for managing discretizations This book uses these modern numerical tools to demonstrate how to solve nonlinear partial differential equations PDEs in parallel It starts from key mathematical concepts such as Krylov space methods preconditioning multigrid and Newton's method In PETSc these components are composed at run time into fast solvers Discretizations are introduced from the beginning with an emphasis on finite difference and finite element methodologies The example C programs of the first 12 chapters listed on the inside front cover solve mostly elliptic and parabolic PDE problems Discretization leads to large sparse and generally nonlinear systems of algebraic equations For such problems mathematical solver concepts are explained and illustrated through the examples with sufficient context to speed further development PETSc for Partial Differential Equations addresses both discretizations and fast solvers for PDEs emphasizing practice more than theory Well structured examples lead to run time choices that result in high solver performance and parallel scalability The last two chapters build on the reader's understanding of fast solver concepts when applying the Firedrake Python finite element solver library This textbook the first to cover PETSc programming for nonlinear PDEs provides an on ramp for graduate students and researchers to a major area of high performance computing for science and engineering It is suitable as a supplement for courses in scientific computing or numerical methods for differential equations

*Solving Differential Equations by Multistep Initial and Boundary Value Methods* L. Brugnano, D. Trigiante, 1998-05-22 The numerical approximation of solutions of differential equations has been and continues to be one of the principal concerns of numerical analysis and is an active area of research The new generation of parallel computers have provoked a reconsideration of numerical methods This book aims to generalize classical multistep methods for both initial and boundary value problems to present a self contained theory which embraces and generalizes the classical Dahlquist theory to treat nonclassical problems such as Hamiltonian problems and the mesh selection and to select appropriate methods for a general purpose software capable of solving a wide range of problems efficiently even on parallel computers

**Matrix Computations** Gene H. Golub, Charles F. Van Loan, 1996-10-15 Revised and updated the third edition of Golub and Van Loan's classic text in computer science provides essential information about the mathematical background and algorithmic skills required for the production of numerical software This new edition includes thoroughly revised chapters on matrix multiplication problems and parallel matrix computations expanded treatment of CS decomposition an updated overview of floating point arithmetic a more accurate rendition of the modified Gram Schmidt process and new material devoted to GMRES QMR and other methods
