Skeel, 2012-12-06 On May 21-24 1997 the Second International Symposium on Algorithms for Macromolecular Modelling was held at the Konrad Zuse Zentrum in Berlin. The event brought together computational scientists in fields like biochemistry, biophysics, physical chemistry, or statistical physics and numerical analysts as well as computer scientists working on the advancement of algorithms for a total of over 120 participants from 19 countries. In the course of the symposium the speakers agreed to produce a representative volume that combines survey articles and original papers, all refereed to give an impression of the present state of the art of Molecular Dynamics. The 29 articles of the book reflect the main topics of the Berlin meeting which were: i) Conformational Dynamics, ii) Thermodynamic Modelling, iii) Advanced Time Stepping Algorithms, iv) Quantum Classical Simulations and Fast Force Field, and v) Fast Force Field Evaluation. **Molecular Simulation and**

Molecular Simulation Daan Frenkel, Berend Smit, 2001-10-19. *Understanding Molecular Simulation: From Algorithms to Applications* explains the physics behind the recipes of molecular simulation for materials science. Computer simulators are continuously confronted with questions concerning the choice of a particular technique for a given application. A wide variety of tools exist so the choice of technique requires a good understanding of the basic principles. More importantly, such understanding may greatly improve the efficiency of a simulation program. The implementation of simulation methods is illustrated in pseudocodes and their practical use in the case studies used in the text. Since the first edition only five years ago, the simulation world has changed significantly: current techniques have matured and new ones have appeared. This new edition deals with these new developments in particular: there are sections on Transition path sampling and diffusive barrier crossing to simulate rare events; Dissipative particle dynamics as a coarse grained simulation technique; Novel schemes to compute the long ranged forces; Hamiltonian and non-Hamiltonian dynamics in the context of constant temperature and constant pressure molecular dynamics simulations; Multiple time step algorithms as an alternative for constraints; Defects in solids; The pruned enriched Rosenbluth sampling; Recoil growth and concerted rotations for complex molecules; Parallel tempering for glassy Hamiltonians. Examples are included that highlight current applications and the codes of case studies are available on the World Wide Web. Several new examples have been added since the first edition to illustrate recent applications. Questions are included in this new edition. No prior knowledge of computer simulation is assumed.

The Art of Molecular Dynamics Simulation D. C. Rapaport, 2004-04-01 The extremely powerful technique of molecular dynamics simulation involves solving the classical many body problem in contexts relevant to the study of matter at the atomistic level Since there is no alternative approach capable of handling this extremely broad range of problems at the required level of detail molecular dynamics methods have proved themselves indispensable in both pure and applied research This book first published in 2004 is a blend of tutorial and recipe collection providing both an introduction to the subject for beginners and a reference manual for the more experienced practitioner It is organized as a series of case studies that take the reader through each of the steps from formulating the problem developing the necessary software and then using the programs to make actual measurements The second edition of the book includes a substantial amount of new material as well as completely rewritten software
