Thermodynamics, Gas Dynamics, and Combustion Henry Clyde Foust III, 2021-12-07 This textbook provides students studying thermodynamics for the first time with an accessible and readable primer on the subject. The book is written in three parts: Part I covers the fundamentals of thermodynamics, Part II is on gas dynamics, and Part III focuses on combustion. Chapters are written clearly and concisely and include examples and problems to support the concepts outlined in the text. The book begins with a discussion of the fundamentals of thermodynamics and includes a thorough analysis of engineering devices. The book moves on to address applications in gas dynamics and combustion to include advanced topics such as two-phase critical flow and blast theory. Written for use in Introduction to Thermodynamics, Advanced Thermodynamics, and Introduction to Combustion courses, this book uniquely covers thermodynamics, gas dynamics, and combustion in a clear and concise manner, showing the integral connections at an advanced undergraduate or graduate student level. Nonlinear Optimization Applications Using the GAMS Technology Neculai Andrei, 2013-06-22 Here is a collection of nonlinear optimization applications from the real world expressed in the General Algebraic Modeling System GAMS. The concepts are presented so that the reader can quickly modify and update them to represent real world situations. Computational Intelligence: A Compendium John Fulcher, L. C. Jain, 2008-06-16 Computational Intelligence: A Compendium presents a well-structured overview about this rapidly growing field with contributions of leading experts in Computational Intelligence. The main focus of the compendium is on applied methods, tried and proven effective to real-world problems, which is especially useful for practitioners, researchers, students, and also newcomers to the field. The 25 chapters are grouped into the following themes: I Overview and Background, II Data Preprocessing and Systems Integration, III Artificial Intelligence, IV Logic and Reasoning, V Ontology, VI Agents, VII Fuzzy Systems, VIII Artificial Neural Networks, IX Evolutionary Approaches, X DNA and Immune-based Computing. **A Field Guide to Genetic Programming**, 2008 Genetic programming (GP) is a systematic, domain-independent method for getting computers to solve problems automatically, starting from a high-level statement of what needs to be done. Using ideas from natural evolution, GP starts from an ooze of random computer programs and progressively refines them through processes of mutation and sexual recombination until high-fitness solutions emerge. All this without the user having to know or specify the form or structure of solutions in advance. GP has generated a plethora of human-competitive results and applications, including novel scientific discoveries and patentable inventions. This unique overview of this exciting technique is written by three of the most active scientists in GP. See www.gp-field-guide.org.uk for more information on the book. **Chemical Engineering Education**, 2001 **Chemical Engineering**, 2003
