**Optimizing Play** Christopher A. Paul,2024-05-14 An unexpected take on how games work what the stakes are for them and how game designers can avoid the traps of optimization The process of optimization in games seems like a good thing who wouldn t want to find the most efficient way to play and win As Christopher Paul argues in *Optimizing Play* however optimization can sometimes risk a tragedy of the commons where actions that are good for individuals jeopardize the overall state of the game for everyone else As he explains players inadvertently limit play as they theorycraft seeking optimal choices The process of developing a meta or the most effective tactic available structures decision making causing play to stagnate A stale meta then creates a perception that a game is solved and may lead players to turn away from the game Drawing on insights from game studies rhetoric the history of science ecology and game theory literature Paul explores the problem of optimization in a range of video games including Overwatch FIFA EA Sports FC NBA 2K Clash Royale World of Warcraft and League of Legends He also pulls extensively from data analytics in sports where the problem has progressed further and is even more intractable than it is in video games given the money sports teams invest to find an edge Finally Paul offers concrete and specific suggestions for
