General Purpose Digital Signal Processing Architecture for Radar Bernard Gold,1971 *Perspectives in Space Surveillance* Ramaswamy Sridharan, Antonio F. Pensa,2017-05-12 The development of deep space surveillance technology and its later application to near Earth surveillance covering work at Lincoln Laboratory from 1970 to 2000 In the 1950s the United States and the Soviet Union raced to develop space based intelligence gathering capability The Soviets succeeded first with SPUTNIK I in 1957 The United States began to monitor the growing Soviet space presence by developing technology for the detection and tracking of man made resident space objects RSOs in near Earth orbit In 1972 the Soviet Union launched a satellite into deep space orbit and the U S government called on MIT Lincoln Laboratory to develop deep space surveillance technology This book describes these developments as well as the later application of deep space surveillance technology to near Earth surveillance covering work at Lincoln Laboratory on space surveillance from 1970 to 2000 The contributors all key participants in developing these technologies discuss topics that include narrow beam narrow bandwidth radar for deep surveillance wide bandwidth radar for RSO monitoring ground based electro optical deep space surveillance and its adaptation for space based surveillance radar as the means of real time search and discovery techniques methods of analyses of signature data from narrow bandwidth radars and the collision hazard for satellites in geosynchronous orbit stemming initially from the failure of TELSTAR 401 They also describe some unintended byproducts of this pioneering work including the use of optical space surveillance techniques for near Earth asteroid detection Contributors Rick Abbott Robert Bergemann E M Gaposchkin Israel Kupiec Richard Lambour Antonio F Pensa Eugene Rork Jayant Sharma Craig Solodyna Ramaswamy Sridharan J Scott Stuart George Zollinger High Performance Embedded Computing Handbook David R. Martinez, Robert A. Bond, M. Michael Vai,2018-10-03 Over the past several decades applications permeated by advances in digital signal processing have undergone unprecedented growth in capabilities The editors and authors of High Performance Embedded Computing Handbook A Systems Perspective have been significant contributors to this field and the principles and techniques presented in the handbook are reinforced by examples drawn from their work The chapters cover system components found in today s HPEC systems by addressing design trade offs implementation options and techniques of the trade then solidifying the concepts with specific HPEC system examples This approach provides a more valuable learning tool Because readers learn about these subject areas through factual implementation cases drawn from the contributing authors own experiences Discussions include Key subsystems and components Computational characteristics of high performance embedded algorithms and applications Front end real time processor technologies such as analog to digital conversion application specific integrated circuits field programmable gate arrays and intellectual property based design Programmable HPEC systems technology including interconnection fabrics parallel and distributed processing performance metrics and software architecture and automatic code parallelization and optimization

Examples of complex HPEC systems representative of actual prototype developments Application examples including radar communications electro optical and sonar applications The handbook is organized around a canonical framework that helps readers navigate through the chapters and it concludes with a discussion of future trends in HPEC systems The material is covered at a level suitable for practicing engineers and HPEC computational practitioners and is easily adaptable to their own implementation requirements
