**Design of Concrete Structures** Canadian Standards Association,2004 This is the sixth edition of CSA A23.3 Design of concrete structures It supersedes the previous editions published in 2004 1994 1984 1977 metric and 1973 imperial and 1959 This Standard is intended for use in the design of concrete structures for buildings in conjunction with CSA A23.1 A23.2 Concrete materials and methods of concrete construction Methods of test and standard practices for concrete and CSA A23.4 Precast concrete Materials and construction Changes in this edition include the following a Clause 3.1 contains new definitions for conventional construction moderately ductile wall systems different types of tilt up construction and gravity load resisting frames b Clause 7.4.3.1 contains new requirements for the clear distance between pretensioning wires or strands at the ends of members Clause 7.6.5 contains new requirements for additional column ties in column slab connections over the slab depth where the slab is discontinuous In Clause 7.6.4 the minimum diameter of spiral reinforced has been changed to 10 mm and the limit of one sixth of the core diameter for the clear spacing between successive turns in a spiral has been removed Clause 7.7.3 has new requirements for column ties in beam column joints c Clause 9.2.1.2 gives guidance on stiffnesses to be used in members of lateral load resisting systems for wind loading Clause 9.8 provides cautionary notes on member minimum thickness requirements and accounting for construction stages and early loading in computing deflections d Clause 10.9.4 contains a new requirement for the required ratio of spiral reinforcement Clause 10.10.4 has increased the maximum factored axial load resistance of spirally reinforced columns and contains new provisions for the resistance of compression members as a function of wall thickness Clause 10.16.3 provides a new factor for determining the amplitude of sway moments e Changes to the shear design provisions in Clause 11 include the following the need to account for cover spalling for members subjected to high shear stress new requirement for sections near supports definition of special member types accounting for effect of bars terminated in the flexural tension zone and increased spacing limit for transverse reinforcement for special cases Changes to the strut and tie design provisions of Clause 11.4 include the following introduction of refined strut and tie models modelling of members subjected to uniform loads revised strut dimensions for struts anchored by reinforcement and for struts in narrow part of fanning compression regions simplified expression for limiting compressive stress in struts new detailing requirements for anchorage of ties and provisions accounting for confinement of bearing in nodal regions f Clause 13 on two way slab systems has been revised to include the following the use of  $d_v$  in determining the one way shear resistance new details for bottom bars in column strips of slabs with drop panels see Figure 13.1 and a change in the definition of  $V_{se}$  for the design of structural integrity reinforcement see Clauses 13.10.6.1 and 3.2 g Clause 14 contains a new requirement to account for strong axis bending in bearing walls and new wall thickness

requirements and slenderness requirements for flexural shear walls h Clause 18.3.1 permits a higher compressive stress limit in the concrete at transfer at the ends of simply supported members i Clause 21 on special provisions for seismic design has a number of significant changes This Clause has been reorganized so that all the requirements for ductile frames are in Clause 21.3 while all the requirements for moderately ductile frames are in Clause 21.4 New dimensional limitations for moderately ductile moment resisting frames have been added in Clause 21.4.2 The requirements 17 for moderately ductile shear walls have been spelled out in greater detail and because of the significant overlap with the requirements for ductile shear walls the requirements for moderately ductile and ductile shear walls are presented together in Clause 21.5 All shear wall design requirements that were redundant with Clause 14 have been removed from Clause 21 Thus the designer of seismic shear walls must look to Clause 14 for important requirements such as dimensional limitations transfer of forces across construction joints and many other requirements The requirements for strength and ductility over the height of shear walls in Clause 21.5.2 have been expanded New requirements have been added for the design for bending moment and shear force below the plastic hinge at the base and for the increased shear force in walls due to the inelastic effects of higher modes New requirements have been added in Clause 21.5.5 for the anchorage of horizontal reinforcement at the ends of walls depending on the level of ductility New requirements have been added in Clause 21.5.7 to ensure that walls have adequate ductility to tolerate some yielding near mid height due to higher mode bending moments The design requirements for two new types of reinforced concrete SFRC moderately ductile coupled walls and moderately ductile partially coupled walls have been added in Clause 21.5.8 The requirements for squat shear walls in Clause 21.5.10 have been relaxed where the walls are longer than needed The requirements for conventional construction shear walls in Clause 21.6.3 have been expanded New requirements for the design and detailing of tilt up construction including moderately ductile and limited ductility tilt up walls and frames are presented in Clause 21.7 New requirements for the design of foundations are presented in Clause 21.10 including the requirement to consider foundation movements New requirements are presented in Clause 21.11 to ensure that all members not considered part of the seismic force resisting system have adequate displacement capacity j Clause 23.2.9 provides revised design provisions for structural integrity of tilt up construction The effective area of reinforcement used to calculate the factored resisting moment has been modified k Annex D on anchorage has been modified to include changes to the requirements specified in Appendix D of ACI 318M 11 318RM 11 Building Code Requirements for Structural Concrete and Commentary Annex D provides new provisions for the bond strength of adhesive anchors in tension installation of horizontal and upwardly inclined adhesive anchors the bond strength of adhesive anchors in tension the resistance of anchors for load cases involving earthquake effects revised breakout resistance in shear for an anchor in cracked concrete and new requirements for the installation of anchors Publisher **Code for the Design of Concrete Structures for Buildings** Canadian Standards Association, Joint CSA/NBC Committee on Reinforced Concrete Design, 1973

**Durability Design of Concrete Structures** Kefei Li,2017-05-01 Comprehensive coverage of durability of concrete at both material and structural levels with design related issues Links two active fields in materials science and structural engineering the durability processes of concrete materials and design methods of concrete structures Facilitates communication between the two communities helping to implement life cycle concepts into future design methods of concrete structures Presents state of the art information on the deterioration mechanism and performance evolution of structural concrete under environmental actions and the design methods for durability of concrete structures Provides efficient support and practical tools for life cycle oriented structural design which has been widely recognized as a new generation of design philosophy for engineering structures The author has long experience working with the topic and the materials presented have been part of the author s current teaching course of Durability and Assessment of Engineering Structures for graduate students at Tsinghua University The design methods and approaches for durability of concrete structures are developed from newly finished high level research projects and have been employed as recommended provisions in design code including Chinese Code and Eurocode 2 National Building Code of Canada ,1990 Code for the Design of Plain Or Reinforced Concrete Structures Canadian Standards Association,1970 **Engineering Materials, Structures, Systems and Methods for a More Sustainable Future** Alphose Zingoni,2025-08-07 Engineering Materials Structures Systems and Methods for a More Sustainable Future comprises 275 papers that were presented at SEMC 2025 the Ninth International Conference on Structural Engineering Mechanics and Computation This event held in Cape Town South Africa from 1 to 3 September 2025 was attended by around 300 participants from 42 countries worldwide The Proceedings are divided into 15 sections The various topics may be grouped into five broad categories covering i the mechanics of materials solids and structures ii numerical modelling computational simulations and experimental testing iii analysis design and construction in the traditional engineering materials iv innovative engineering materials structures and methods v maintenance long term performance life cycle considerations and sustainable construction Engineering Materials Structures Systems and Methods for a More Sustainable Future will be of interest to civil structural mechanical marine and aerospace engineers as well as planners and architects Two versions of the papers are available full papers of length six pages are included in the e book while short papers of length two pages intended to be concise but self contained summaries of the full papers are in the printed book **Advances in Engineering Materials, Structures and Systems: Innovations, Mechanics and Applications** Alphose Zingoni,2019-08-21 Advances in Engineering Materials Structures and Systems Innovations Mechanics and Applications comprises 411 papers that were presented at SEMC 2019 the Seventh International Conference on Structural Engineering Mechanics and Computation held in Cape Town South Africa from 2 to 4 September 2019 The subject matter reflects the broad scope of SEMC conferences and covers a wide variety of engineering materials both traditional and innovative and many types of structures The many topics featured in these Proceedings can be
