The Path To Molecular Orbital Theory:

Introduction to Elementary Molecular Orbital Theory and to Semiempirical Methods G.H. Wagniere,2012-12-06

These notes summarize in part lectures held regularly at the University of Zurich and in the Summer of 1974 at the Seminario Latinoamericano de QUimica Cuantica in Mexico I am grateful to those who have encouraged me to publish these lectures or have contributed to them by their suggestions In particular I wish to thank Professor J Keller of the Universidad Nacional Autonoma in Mexico Professor H Labhart and Professor H Fischer of the University of Zurich as well as my former students Dr J Kuhn Dr W Hug and Dr R Geiger The aim of these notes is to provide a summary and concise introduction to elementary molecular orbital theory with an emphasis on semiempirical methods Within the last decade the development and refinement of ab initio computations has tended to overshadow the usefulness of semiempirical methods However both approaches have their justification Ab initio methods are designed for accurate predictions at the expense of greater computational labor The aim of semiempirical methods mainly lies in a semiquantitative classification of electronic properties and in the search for regularities within given classes of larger molecules The reader is supposed to have had some previous basic instruction in quantum mechanics such as is now offered in many universities to chemists in their third or fourth year of study The bibliography should encourage the reader to consult other texts in particular also selected publications in scientific journals

Chemists Dean Miller,2014-01-01 In this book a breakdown of the life and work of some of history's pioneers in the study of chemistry are thoroughly explored This biographical view provides excellent sketches for trailblazers in the area of chemistry Articles are devoted to specific scientists covering their contributions to their field specifically addressing how their research discoveries and inventions impacted human understanding and experience Most importantly this book provides a chapter specifically devoted to the top scientific contributors of the 21st century bringing readers current with both timely events and successes that have moved human kind forward

The Chemical Bond I D. Michael P. Mingos,2016-09-09 The series Structure and Bonding publishes critical reviews on topics of research concerned with chemical structure and bonding The scope of the series spans the entire Periodic Table and addresses structure and bonding issues associated with all of the elements It also focuses attention on new and developing areas of modern structural and theoretical chemistry such as nanostructures molecular electronics designed molecular solids surfaces metal clusters and supramolecular structures Physical and spectroscopic techniques used to determine examine and model structures fall within the purview of Structure and Bonding to the extent that the focus is on the scientific results obtained and not on specialist information concerning the techniques themselves Issues associated with the development of bonding models and generalizations that illuminate the reactivity pathways and rates of chemical processes are also relevant The individual volumes in the series are thematic The goal of each volume is to give the reader whether at a university or in industry a comprehensive overview of an area where new insights are emerging that are of interest to a larger scientific audience Thus

each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole The most significant developments of the last 5 to 10 years should be presented using selected examples to illustrate the principles discussed A description of the physical basis of the experimental techniques that have been used to provide the primary data may also be appropriate if it has not been covered in detail elsewhere The coverage need not be exhaustive in data but should rather be conceptual concentrating on the new principles being developed that will allow the reader who is not a specialist in the area covered to understand the data presented Discussion of possible future research directions in the area is welcomed Review articles for the individual volumes are invited by the volume editors
