

The background of the slide is a faded, semi-transparent version of Raphael's fresco 'The School of Athens'. It depicts various ancient Greek philosophers in a grand architectural setting, engaged in various activities of study and teaching. The figures are rendered in classical style with detailed drapery and anatomical precision. The overall tone is light and scholarly.

**Philosophy of Mathematics** Alexander Paseau, 2017 Mathematics is everywhere and yet its objects are nowhere There may be five apples on the table but the number five itself is not to be found in or beside or anywhere near the apples So if not in space and time where are numbers and other mathematical objects such as perfect circles and functions And how do we humans discover facts about them be it Pythagoras Theorem or Fermat's Last Theorem The metaphysical question of what numbers are and the epistemological question of how we know about them are central to the philosophy of mathematics These and related philosophical questions are of particular interest because of mathematics unusual status Mathematics is exceptional in that on the one hand it appears unhesitatingly true no one doubts that  $2 + 3 = 5$  but on the other as just noted it is not about the physical world This ambivalent status is what gives the philosophy of mathematics its special interest The philosophy of mathematics is also one of the oldest academic fields more or less coeval with philosophy itself But contemporary philosophy of mathematics is rather different from its pre twentieth century antecedents largely for three reasons The first is that since the seventeenth century mathematics has become integral to science Science has over the past few centuries become increasingly mathematical and indeed the fundamental science of nature physics is today recognised as a branch of applied mathematics The second is that mathematics underwent a transformation in the course of nineteenth century having started the century as a rather traditional looking science of quantity it emerged a hundred years later a radically transformed abstract theory of structure The final factor in the transformation of the philosophy of mathematics is the rise of modern logic Developed by Frege Cantor and others in the late nineteenth century modern logic pervades contemporary mathematics philosophy and computer science and has had an immeasurable effect on the philosophy of mathematics These volumes will collect the major works in this major field with a focus on the last few decades The anthology will include technical work which interprets philosophically significant mathematical results or subfields of mathematics as well as purely philosophical writing aimed at those without advanced mathematics The collection should be of interest to both philosophers and mathematicians as well as to anyone who is susceptible to wondering what the main intellectual tool used in science economics and finance and indeed everyday life is ultimately about

**Philosophy of Mathematics** Stewart Shapiro,1997-08-07 Shapiro argues that both realist and anti realist accounts of mathematics are problematic To resolve this dilemma he articulates a structuralist approach arguing that the subject matter of a mathematical theory is not a fixed domain of numbers that exist independent of each other but rather is the natural structure the pattern common to any system of objects that has an initial object and successor relation satisfying the induction principle
