

Chapter 3

Data analysis, findings and literature review

3.1 INTRODUCTION

Chapter 2 described the research design and methodology. This chapter discusses the research findings with reference to the literature reviewed.

3.2 SAMPLE

Sampling is "the process of selecting a portion of the population to represent the entire population" (Polit et al 2001:233). The population refers to "individuals in the universe who possess specific characteristics, or a set of entities that represent all the measurements of interest to the researcher" (De Vos, Strydom, Fouché & Delport 2004:209).

In this study, the researcher used an accessible population to represent a targeted population. The researcher used purposive sampling to select the respondents. This was done to ensure that the sample adequately represented the target population, to obtain the most relevant information, and to allow informational adequacy and appropriateness of data.

The sample was drawn from a population of newly initiated young men, aged between 15 and 20, who volunteered to participate in the study. Three groups from different locations in East London in the Eastern Cape Province were invited to voluntarily participate in the study. Two groups were drawn from a public high school and the third group consisted of young males who were undergoing training as student nurses in a public general hospital in East London. The first two groups consisted of four participants each and the other group consisted of six participants.

The interviews were conducted until saturation of data was reached. According to Polit et al (2001:470), data saturation is "the process of collecting data in a grounded theory study to the point where a sense of closure is achieved because new data yield redundant information". In this study data saturation was reached when the participants
