## **Chapter 7 Freshwater Ecosystem Services:**

*Water Management* Shimon C. Anisfeld, 2024-06-27 *Water Management* fills a critical gap providing a base of knowledge to understand and manage complex water problems. It is geared primarily towards students at the undergraduate and graduate levels but will also be a helpful resource for practicing water professionals who are looking for new ideas or a broader view of the subject. This text explores the entire gamut of water issues from dams to desalination from prior appropriation to pumped storage from sanitation to stormwater. Rather than teaching from one disciplinary perspective it examines water through a variety of lenses hydrology climate science ecology and engineering but also law economics history and environmental justice. The result is a comprehensive introduction to one of the most demanding challenges of our time developing just and sustainable solutions to water management.

*Aquatic Functional Biodiversity* Andrea Belgrano, Guy Woodward, Ute Jacob, 2015-07-25 *Aquatic Functional Biodiversity: An Ecological and Evolutionary Perspective* provides a general conceptual framework by some of the most prominent investigators in the field for how to link evolutionary approaches with functional diversity to understand and conserve the provisioning of ecosystem services in aquatic systems. Rather than producing another methodological book the editors and authors primarily concentrate on defining common grounds connecting conceptual frameworks and providing examples by a more detailed discussion of a few empirical studies and projects which illustrate key ideas and an outline of potential future directions and challenges that are expected in this interdisciplinary research field. Recent years have seen an explosion of interest in using network approaches to disentangle the relationship between biodiversity community structure and functioning. Novel methods for model construction are being developed constantly and modern methods allow for the inclusion of almost any type of explanatory variable that can be correlated either with biodiversity or ecosystem functioning. As a result these models have been widely used in ecology conservation and eco evolutionary biology. Nevertheless there remains a considerable gap on how well these approaches are feasible to understand the mechanisms on how biodiversity constrains the provisioning of ecosystem services. Defines common theoretical grounds in terms of terminology and conceptual issues. Connects theory and practice in ecology and eco evolutionary sciences. Provides examples for successful biodiversity conservation and ecosystem service management.
