

Chapter 3

Operating Decisions and the Accounting System

ANSWERS TO QUESTIONS

1. A typical business operating cycle for a manufacturer would be as follows: inventory is purchased, cash is paid to suppliers, the product is manufactured and sold on credit, and the cash is collected from the customer.

2. The time period assumption means that the financial condition and performance of a business can be reported periodically, usually every month, quarter, or year, even though the life of the business is much longer.

3. $\text{Net Income} = \text{Revenues} + \text{Gains} - \text{Expenses} - \text{Losses}.$

Each element is defined as follows:

Revenues -- increases in assets or settlements of liabilities from central or major *ongoing operations*.

Gains -- increases in assets or settlements of liabilities from *peripheral transactions*.

Expenses -- decreases in assets or increases in liabilities from central or major *ongoing operations*.

Losses -- decreases in assets or increases in liabilities from *peripheral transactions*.

4. Both revenues and gains are inflows of net assets. However, revenues occur in the normal course of operations, whereas gains occur from transactions peripheral to the central activities of the company. An example is selling an investment at a price above cost (at a gain) for companies not in the business of selling investments.

Both expenses and losses are outflows of net assets. However, expenses occur in the normal course of operations, whereas losses occur from transactions peripheral to the central activities of the company. An example is a loss suffered from fire damage.

5. Accrual accounting requires recording revenues when earned and recording expenses when incurred, regardless of the timing of cash receipts or payments. Cash basis accounting is recording revenues when cash is received and expenses when cash is paid.

Study Guide for Use with Financial Accounting Robert Libby, Patricia A. Libby, Daniel G. Short, 2003 Libby Libby Short wrote this text based on their belief that the subject of financial accounting is inherently interesting but financial accounting textbooks are often not. They believe most financial accounting textbooks fail to demonstrate that accounting is an exciting field of study and one that is important to future careers in business. When writing this text they considered career relevance as their guide when selecting material and the need to engage the student as their guide to style pedagogy and design. Libby Libby Short is the only financial accounting text to successfully implement a real world single focus company approach in every chapter. Students and instructors have responded very favorably to the use of focus companies and the real world financial statements. The companies chosen are engaging and the decision making focus shows the relevance of financial accounting regardless of whether or not the student has chosen to major in accounting.
