and computer design Ideal for self study by engineers and computer scientists     Theoretical Computer Science Oded Goldreich,Arnold L. Rosenberg,2006-03-22 This volume commemorates Shimon Even one of founding fathers of Computer Science in Israel who passed away on May 1 2004 This Festschrift contains research contributions surveys and educational essays in theoretical computer science written by former students and close collaborators of Shimon The essays address natural computational problems and are accessible to most researchers in theoretical computer science     *Starting Out with Programming Logic and Design* Tony Gaddis,2009-10-02 Starting Out with Programming Logic and Design is a language independent introductory programming book that orients students to programming concepts and logic without assuming any previous programming experience In the successful accessible style of Tony Gaddis best selling texts useful examples and detail oriented explanations allow students to become comfortable with fundamental concepts and logical thought processes used in programming without the complication of language syntax Students gain confidence in their program design skills to transition into more comprehensive programming courses Introduction to Computers and Programming Input Processing and Output Modules Decision Structures and Boolean Logic Repetition Structures Functions Input Validation Arrays Sorting and Searching Arrays Files Menu Driven Programs Object Oriented Programming GUI Applications and Event Driven Programming For all readers interested in programming logic and introductory programming     *Timed Boolean Functions* William K.C. Lam,Robert K. Brayton,2012-12-06 Timing research in high performance VLSI systems has advanced at a steady pace over the last few years while tools especially theoretical mechanisms lag behind Much present timing research relies heavily on timing diagrams which although intuitive are inadequate for analysis of large designs with many parameters Further timing diagrams offer only approximations not exact solutions to many timing problems and provide little insight in the cases where temporal properties of a design interact intricately with the design s logical functionalities This book presents a methodology for timing research which facilitates analysis and design of circuits and systems in a unified temporal and logical domain In the first part we introduce an algebraic representation formalism Timed Boolean Functions TBF s which integrates both logical and timing information of digital circuits and systems into a single formalism We also give a canonical form TBF BDD s for them which can be used for efficient manipulation In the second part we apply Timed Boolean Functions to three problems in timing research for which exact solutions are obtained for the first time 1 computing the exact delays of combinational circuits and the minimum cycle times of finite state machines 2 analysis and synthesis of wavepipelining circuits a high speed architecture for which precise timing relations between signals are essential for correct operations 3 verification of circuit and system performance and coverage of delay faults by testing     **Switching Theory** Paul E. A. Wood,1968     **Information Communication Technologies: Concepts, Methodologies, Tools, and Applications** Van Slyke, Craig,2008-04-30 The rapid development of information communication technologies ICTs is having a profound impact across numerous aspects of social economic and cultural activity worldwide and keeping pace with the
