up the Python environment for trading and connectivity with brokers you'll then learn the important aspects of financial markets. As you progress you'll learn to fetch financial instruments, query and calculate various types of candles and historical data, and finally compute and plot technical indicators. Next you'll learn how to place various types of orders such as regular bracket and cover orders and understand their state transitions. Later chapters will cover backtesting, paper trading, and finally real trading for the algorithmic strategies that you've created. You'll even understand how to automate trading and find the right strategy for making effective decisions that would otherwise be impossible for human traders. By the end of this book you'll be able to use Python libraries to conduct key tasks in the algorithmic trading ecosystem. Note: For demonstration we're using Zerodha, an Indian Stock Market broker. If you're not an Indian resident you won't be able to use Zerodha and therefore will not be able to test the examples directly. However, you can take inspiration from the book and apply the concepts across your preferred stock market broker of choice.

What you will learn:

- Use Python to set up connectivity with brokers.
- Handle and manipulate time series data using Python.
- Fetch a list of exchanges, segments, financial instruments, and historical data to interact with the real market.
- Understand fetch and calculate various types of candles and use them to compute and plot diverse types of technical indicators.
- Develop and improve the performance of algorithmic trading strategies.
- Perform backtesting and paper trading on algorithmic trading strategies.
- Implement real trading in the live hours of stock markets.

Who this book is for: If you are a financial analyst, financial trader, data analyst, algorithmic trader, trading enthusiast, or anyone who wants to learn algorithmic trading with Python and important techniques to address challenges faced in the finance domain, this book is for you. Basic working knowledge of the Python programming language is expected. Although fundamental knowledge of trade-related terminologies will be helpful, it is not mandatory.

Artificial Intelligence in Finance Yves Hilpisch, 2020-10-14

The widespread adoption of AI and machine learning is revolutionizing many industries today. Once these technologies are combined with the programmatic availability of historical and real-time financial data, the financial industry will also change fundamentally. With this practical book, you'll learn how to use AI and machine learning to discover statistical inefficiencies in financial markets and exploit them through algorithmic trading.

Author Yves Hilpisch shows practitioners, students, and academics in both finance and data science practical ways to apply machine learning and deep learning algorithms to finance. Thanks to lots of self-contained Python examples, you'll be able to replicate all results and figures presented in the book. In five parts, this guide helps you:

- Learn central notions and algorithms from AI, including recent breakthroughs on the way to artificial general intelligence (AGI) and superintelligence (SI).
- Understand why data-driven finance, AI, and machine learning will have a lasting impact on financial theory and practice.
- Apply neural networks and reinforcement learning to discover statistical inefficiencies in financial markets.
- Identify and exploit economic inefficiencies through backtesting and algorithmic trading, the automated execution of trading strategies.
- Understand how AI will influence the competitive dynamics in the financial industry and what the potential emergence of a financial singularity
